

Why settle for an imitation when you can have the original?

The Whalen Series VI Heat Pump and Air Conditioner

Are you looking for a unit that offers design flexibility, provides a lower installed cost, reduces maintenance, and features options like aluminum supply and return grilles for a superior long-lasting appearance? The Whalen Company is your only choice. We invented the vertical unit and specialize only in this form of air conditioning. Our vertical concept eliminates the dropped ceilings, access panels, and vertical pipe chases required by other systems. This means additional construction cost savings. When you consider the benefits of floor-level refrigeration chassis removal and quiet operation, there is only one choice.

- Flexible configurations
- Efficient
- Lower installed cost
- Reduced maintenance costs
- Small footprint
- Electric and hydronic heat options
